RESEARCH & PROJECT EXPERIENCE

Impact of impulsive and dependent interference on radio communications (fully funded ANR project ARBurst in collaboration with INSA/CITI Lyon, INSA/IETR Rennes and IRCICA Lille.) 10/2017 - 06/2021
Responsibility: - Model interference and essentially the dependent and impulsive case. Capacity has to be revisited under the impact of dependence on capacity. Other metrics will be necessary for the bursty communications and lead to multi-object optimization.

Green Transmissions: the Tradeoff between Energy Efficiency and Spec-

trum Efficiency 10/2014 - 06/2016
Responsibility: Study and analyze the performance of Distributed Antenna Systems focusing on the tradeoff between energy efficiency and spectrum efficiency. Both the single-user and multi-user scenarios are studied.

High Energy Efficient Transmissions (funded by the Fundamental Research Grants for the key Universities) 01/2014 - 12/2015
Responsibility: Study and design efficient MAC protocol for Ultra Dense Network. Mathematical model is proposed to improve the performance based on Stochastic Geometry.

Research on Wireless Access Strategies based on EE and SE Optimization for 5G cellular Networks 10/2013 - 10/2014
Responsibility: Familiarize myself with the literature and write a review report in energy efficient cellular networks
